innovative excellence

Reliable and Innovative

Our new Hands, Feet, and Face UV Therapy Systems are based on over 20 years of experience. The optional Apple iPad control panel offers a break-through user experience to UV Therapy Systems.

The devices are completely made out of metal, and a safe, easy to clean acrylic cover protects the lamps. A metal cover shields the patient's eyes from UV radiation when the treatment is ongoing.

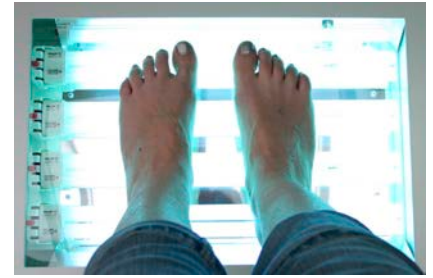

Flexible and Easy to Use

The UVee T1000 and T2000 are standard equipped with a full color, easy to read, interactive touch screen. Operating the device is easy for both patients at home and doctors in the office.

The UVee T1000 unit can be used separately to treat hands, feet, or face. The UVee T2000 consists of two units to treat hands and feet, for example, simultaneously. Sturdy supports at the bottom allow the unit to be tilted to an ergonomic position.

Secure and Economical

The UVee T1000 and T2000 are built with the latest technologies, using reliable components for a long trouble free lifetime.

Dimensions	
• Outer	53 x 34 x 8 cm
• Cover	36 x 28 x 8 cm
• Weight	8 kg (T1000), 16 kg (T2000)
